

# Tubeless MTB TIRE REPAIR KITS

USER MANUAL >>

## Step 1.

Remove foreign object.

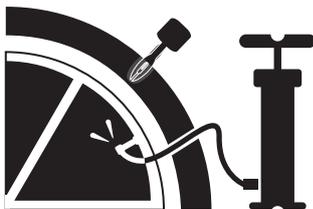

## Step 2.

Thread a plug into tool and stick the free end of the plug to the side of the needle.

## Step 3.

Find the hole, and insert tool. (Having a decent amount of pressure in the tire makes it easier to use)

## Step 4.

Pump up the tire to normal air pressure (psi)

## Step 5.

Remove tool and using knife or scissors trim excess plug material with tire tread.  
- Ride on and keep going -
